

Amendments to the Specification:

Please amend the paragraph beginning on page 2 at line 25 as follows:

The molding may be produced in a mold casting process using a conventional mold, as is also used in the production of foam. The ~~bond~~ composite material brought together within ~~integrated in~~ the molding according to ~~of~~ the invention optimally joins the spring or damping properties of the individual materials, resulting in a considerable advance in seat comfort. Alternate arrangements, such as multi-layered arrangements of the different materials, are possible. Also different arrangements with respect to the spatial organization of the materials are ~~also~~ possible, such as where one material is arranged only in the region of the seat panel. The different arrangements may advantageously be selected and used depending on the required properties.
